#### ACADEMIC COURSE WORKING PROGRAM

| Academic course:                | Economics and business                                   |
|---------------------------------|--|
|                                 | (Name)   |
| Form of education:              | Full-time  |
|                                 | (Full-time /full-time - correspondence/correspondence)   |
| Level of higher education:      | Bachelor's program                                       |
|                                 | (Bachelor's program/specialist program/Master's program) |
| Workload in hours (in credits): | 216 (6)  |
|                                 | (Hours (CU))   |
| Training program (degree):      | 15.03.06 Mechatronics and Robotics                       |
|                                 | (Code and denomination of degree)                        |
| Direction:                      | Mechatronics and Robotics                                |
|                                 | (Title of curriculum)                                    |

#### 1. General Provisions

#### 1.1. Goals and Objectives of the Course

The purpose of the course is to form a system of knowledge and develop skills in the fields of industrial production management and commercialization of industrial innovations; technological entrepreneurship and business implementation in the industrial market.

#### 1.2. Studied Objects of the Course

fixed and working capital; labour; investments and sources of economic effects at an industrial enterprise; economic processes in the industrial market.

#### 1.3. Starting Conditions

Unstipulated

#### 2. Planned Results of the Course Training

| Competence | Indicator's<br>Index | Planned Results of the<br>Course Training (to<br>know, to know how, to<br>master)  | Indicator of Attaining Competence which the planned results of training are correlated with   | Means of<br>Assessment |
|------------|----------------------|--|---|------------------------|
| UC-1       | IA-1 <sub>uc-1</sub> | To know the methods of searching information and making critical analysis and synthesis of industry technical and economic information for feasibility study aimed at solution of the given professional tasks     | Knows how to search, to make critical analysis and synthesis of information aimed at solution of the given professional tasks   | Test                   |
|            | IA-2 <sub>uc-1</sub> | To be able to apply systemic approach on the basis of search, critical analysis and synthesis of industry technical and economic information aimed at solution of science-oriented problems of professional field. | Is able to apply systemic approach on the basis of search, critical analysis and synthesis of information aimed at solution of science-oriented problems of professional field. | Practical<br>review    |
|            | IA-3 <sub>uc-1</sub> | To master the skills of search, synthesis and critical analysis of technical and economic  |   | Test                   |

|      |                      | information in                            | professional field;                            |              |

### Topics of exemplary practical work

| SI.<br>No | Topic of practical (seminar) work  |
|-----------|--|
| 1         | Analyze changes in the composition and structure of fixed assets, evaluate the |
|           | effectiveness of their use   |
| 2         | Application of depreciation methods  |
| 3         | Efficiency evaluation of plant capacity  |
| 4         | Rationing of working capital in an industrial enterprise                       |

| 5  | Assessment of working capital efficiency  |
|----|---|
| 6  | Rationing the number of employees in an industrial enterprise                   |
| 7  | Assessment of staff productivity in an industrial enterprise                    |
| 8  | Application of remuneration forms, calculation of wages according to the tariff |
|    | and tariff-free system  |
| 9  | Production cost calculation in industrial production                            |
| 10 | Application of pricing methods  |
| 11 | Analysis of financial and economic activities at the enterprise                 |
| 12 | Assessment of economic effects commercialization                                |
| 13 | Calculation of investment project performance indicators                        |
| 14 | Formation of a system of plans at an industrial enterprise                      |
| 15 | Planning of innovative activities   |
| 16 | Creating a business plan  |
| 17 | Analyze of the company's competitive position in the market and develop of a    |
|    | strategy to improve it  |
| 18 | Decision-making management  |
| 19 | Industrial management   |
| 20 | Development of management styles and staff motivation                           |
| 21 | Assessment of enterprise competitiveness and its product on the market          |
| 22 | Marketing research and segmentation   |
| 23 | Sales management at an industrial enterprise                                    |

Topics of exemplary laboratory practice - Unstipulated

| SI.<br>№ | Topic of laboratory work |
|----------|--------------------------|
|          |                          |
|          |                          |

#### 5. Organizational and Pedagogical Conditions

#### 5.1. Educational Technologies Used for Competences Formation

Holding lectures in the discipline is based on the active method of training in the process of which students are not passive but active participants of the lesson answering questions of the teacher. Teacher's questions are aimed at activating the process of learning material as well as at the development of logical thinking. The questions stimulating associative thinking and connecting new material with the previous one are identified by the teacher in advance.

Practical lessons are held by realization of the method based on active training: problem areas are determined, groups are formed. The following aims are pursued in the process of practical education: use of definite disciplines knowledge and creative methods in solving problems and decision-making; students' skill-building of teamwork, interpersonal communication and development of leadership skills; consolidation of the basic theoretical knowledge.

Laboratory classes are based on an interactive learning method in which students communicate not only with the teacher but also with each other. At the same time, students 'activity in the learning process dominates. The teacher's place in interactive classes is reduced to orienting students 'activities to achievement of the goals of studies. Interactive lectures, group discussions, role-playing games, training sessions, and analysis of situations and simulation models are used in academic studies.

#### 5.2. Students' Manual for the Course Study

Learning the course students are recommended to fulfill the following positions:

1. Learning of the discipline should be done systematically.

2. After learning one of the course unit with the help of the text-book or lecture notes it is recommended to reproduce in memory the basic terms, definitions, notions of the unit.

3. Special attention should be paid to the reports on practical studies, laboratory works and individual

complex tasks for self-work.

4. The topic of questions studied individually is given by the teacher at the lectures. Also the teacher refers to the literary resources (first of all, to the newly published in periodicals) in order the students understand the problems touched on the lectures in detail.

## 6. List of Teaching Materials and Information Supply for Students' Self work in the Discipline

#### 6.1. Paper-based courseware

| Sl.№ | Bibliographic entry (author, title, mode of publication, place, publishing house, year of publication, number of pages ) | Number of copies in the library |
